

Set up eduroam with the geteduroam app

The geteduroam app helps you set up eduroam quickly and securely on your smartphone, tablet, or laptop. The app applies the correct Wi-Fi settings for TU Braunschweig and ensures that you connect to a properly configured eduroam network. This also supports secure verification of the server certificate.

Before you start

For the setup, you will need:

- an internet connection during the initial setup

Step-by-step setup

- Download the geteduroam app.
The app is available for Android, iPhone/iPad, Windows, and Linux. On Linux, the app is available, among other places, via Flathub.
Here is the link to the apps.
- Open the app and search for **Technische Universität Braunschweig**.
- Sign in.
 - Enter your **TUBS ID** and password exactly as provided by your institution.
- Confirm the setup.
The app will configure the Wi-Fi profile for you. After that, your device should automatically connect to eduroam whenever the network is within range.
- Keep the app installed.
This is very important: if you uninstall the geteduroam app, the eduroam configuration created by it will also be removed. The app should therefore remain installed as long as you use eduroam.

Example video for setup on Windows:

The setup on other platforms may vary slightly.
